## **REASONS FOR ALLOWANCE**

> The following is an examiner's statement of reasons for allowance: The present invention is directed towards a method for gradually deforming an initial realization formed from measurements or observations and defining the distribution of a set of objects in a zone of a heterogeneous medium such as a geologic structure, generated by simulation of an object type stochastic model, the objects being distributed in the zone according to a Poisson point process in form of figurative points with a point density (x) varying according to their position (x) in the zone. The sole independent claim identifies the uniquely distinct feature " for gradually modifying a uniform random vector according to a gradual deformation procedure, so as to obtain gradual migration of each object and consequently gradual change in the distribution of the objects in the zone, until a final realization best adjusted to parameters relative to the structure of the medium, such as hydrodynamic parameters, is obtained, which gives a realistic representation of the configuration of the

objects in the modeled heterogeneous medium". The closest prior art, Irie et al.

(USPN 5,555,320) disclose, pattern recognition system with improved recognition rate using nonlinear transformation; while Kamayashi (USPN 5,285,395) discloses, distribution generation system, and optimization system that adopts distribution generation system, either singularly or in combination, fail to anticipate or render the above underlined limitation obvious.
